Highlights		Investment Rationale/Risk	
► In 2023, we expect revenue growth of about \$53.2 billion, a decrease of 8.4% Y/Y, as the anticipated decline in Humira sales is partially offset by fast-growing immunology drugs Skyrizi and Rinvoq. The 2020 acquisition of the former Allergan also brought in significant growth contributors in medical aesthetics and neuroscience areas. These latter areas contributed almost \$12 billion in revenues in 2022. ► ABBV's revenues have historically been largely tied to sales of its blockbuster drug, Humira, which began to experience biosimilar competition outside of the U.S. [OUS] in October 2018. In 2022, U.S. Humira sales grew 7.4% versus 2021, while OUS sales of Humira declined 22%. In 2023, we expect overall Humira sales to drop 32% Y/Y. ► At the end of March 2023, ABBV had net debt of \$55.8 billion [a decline of \$12 billion since the end of 2021]. In February 2023, ABBV guided to a 2023 debt reduction of \$4 billion. We note that 12 months ago, in February 2022, ABBV had guided to debt reduction of \$12 billion in 2022, which it successfully achieved. Even with likely reduced earnings in 2023, we think the current goal on debt reduction is achievable.		► Our opinion on shares of Abbvie is Hold following the Q2 earnings release. The near term has looming headwinds [notably the 2023 loss of exclusivity for Humira, which contributed \$21.2 billion of 2022 net revenues, 37% of ABBV's total revenues], although the company has two relatively new immunology drugs, Skyrizi and Rinvoq, to assist the growth profile after 2023. We note that these two latter drugs contributed more than \$2.8 billion in revenues in Q2 2023. Management sees a combined potential for these two drugs for more than \$15 billion by 2025 [an implied CAGR of at least 52%]. However, we also note that ABBV's aesthetics segment, which ranked fourth in the company at roughly around 11% of revenues, is largely a cash-pay business by consumers, and if the U.S. enters a steep recession it could be exposed to risk of weakening demand. ► Risks to our target price and opinion include favorable/unfavorable regulatory rulings; litigation risk; worse-than-expected uptake of high-growth drugs; and stronger Humira sales. ► Our 12-month target price of \$152, 13.1x our 2024 EPS estimate, is slightly above ABBV's 10-year historical forward P/E average, and merited by growth potential from Skyrizi and Rinvoq.	

Analyst's Risk Assessment		
LOW	MEDIUM	HIGH

ABBV has been heavily reliant on one drug, Humira [37% of 2022 total net revenues], which has been facing biosimilar competition in recent years. However, this risk is balanced with newly approved drugs and the May 2020 acquisition of Allergan, which help diversify sales. Nonetheless, given the heavy reliance on immunology drugs and guidance that implies solid growth potential from a few products, we see ABBV as a medium risk name.

Business Summary Sep 01, 2023

CORPORATE OVERVIEW. AbbVie (ABBV) is a global, research-based biopharmaceutical company. ABBV develops and markets advanced therapies that address some of the world’s most complex and serious diseases. ABBV’s products fall into the following major categories: immunology, which includes rheumatology, gastroenterology, and dermatology; oncology, including blood cancers; neurological disorders, such as Parkinson’s disease and migraine; eye care; women’s health products; and other, which includes treatments for hepatitis C and metabolic diseases.

ABBV’s largest and most successful drug is Humira, which is approved to treat 14 autoimmune diseases in the U.S., Canada, Mexico, and the European Union. Humira is also sold in many other markets worldwide and the drug accounted for approximately 37% of ABBV’s total net revenues in 2022 and 58% in 2019 [i.e., before Allergan acquisition]. Humira began to experience biosimilar competition in countries outside the U.S. [OUS] in 2017, resulting in rapidly declining OUS sales. OUS sales accounted for approximately 12% of global Humira revenues in 2022, down from 33% in 2017. We expect ABBV to encounter U.S. biosimilar competition to Humira beginning in 2023. The upcoming entrance of U.S. biosimilar competition will likely significantly erode ABBV’s total sales.

With the acquisition of Allergan plc (AGN) in May 2020, ABBV added a large portfolio of branded pharmaceutical, device, biologic, surgical, and regenerative medicine products to its portfolio. AGN’s products focus on four key therapeutic areas, including medical aesthetics, eye care, central nervous system, and gastroenterology. AGN was best known for selling Botox.

CORPORATE STRATEGY. In 2022, ABBV’s key strategic objectives include: [i] maximizing the benefits of the AGN acquisition to create a more diversified revenue base with multiple long-term growth drivers; [ii] increasing revenues by leveraging ABBV’s commercial strength and international infrastructure across AGN’s therapeutic areas and ensuring strong commercial execution of new product launches; [iii] continuing to invest in and expand its pipeline in support of opportunities in immunology, oncology, aesthetics, neuroscience, eye care, and women’s health as well as continued investment in key on-market products; [iv] expanding operating margins; and [v] returning cash to shareholders via a strong and growing dividend while also reducing debt. We expect ABBV to achieve these objectives through growing immunology and hematologic oncology sales, effective management of Humira international biosimilar erosion, integration synergies, and clinical pipeline development.

PIPELINE. According to ABBV’s 2021 Form 10-K, the company had approximately 90 compounds or indications in clinical development, with a focus on immunology, oncology, aesthetics, neuroscience, and eye care. Of ABBV’s programs, approximately 50 are in mid- or late-stage development.

IMPACT OF SIGNIFICANT DEVELOPMENTS. On May 8, 2020, ABBV completed its \$63.4 billion acquisition of Botox-manufacturer Allergan plc (AGN), of which \$39.7 billion was paid for in cash. Management expects it can achieve annual pre-tax synergies and other cost reductions of more than \$2 billion by year 3; we view this goal as achievable. We think the acquisition provides revenue diversification, robust long-term free cash flow potential, and organizational synergies.

DRUG PRICING NEGOTIATIONS: The first list of 10 top-selling prescription drugs subject to negotiations with Medicare was announced by the Centers for Medicare & Medicaid Services on August 29, 2023. Imbruvica, co-developed and commercialized by Abbvie and JNJ to treat blood cancers is in on the list. During June 2022-May 2023, Medicare Part D spending on Imbruvica was \$2.66 billion. Imbruvica’s expected loss of exclusivity date is 2032.

FINANCIAL TRENDS. ABBV’s revenues were \$58.5 billion in 2021, up \$2.3 billion versus 2021. The improvement in revenue was largely driven by Skyrizi/Rinvoq [+ \$3.1 billion], with an assist from Neuroscience [+ \$0.6 billion], but declines were felt elsewhere, such as in Eye Care [- \$0.8 billion]. Adjusted earnings per share [EPS] grew 8.4% year-over-year to \$13.77, and its five-year EPS CAGR is 20%.

While ABBV’s net debt to total capital seems high at 67% as of December 31, 2022, the company’s net leverage ratio [net debt to trailing-12-month EBITDA] was fairly good at 1.8x. ABBV took on significant debt to finance its AGN acquisition, but the company is committed to reducing its net leverage ratio to below 2.0x by the end of 2022, which it achieved. In addition, ABBV has an above-average free cash flow yield among large-cap health care companies, at 7.8%.

AbbVie Inc.

Sub-Industry Outlook

We have a neutral outlook on the biotech sub-industry. We expect lower demand for Covid-19 vaccines and treatments Y/Y, despite recent upticks in cases and hospitalizations globally, which may continue through Q1 2024. The Biden administration declared the end of the Covid-19 Health Emergency in May, which means that going forward, Covid-19 vaccines and therapies are no longer free. We expect Covid-related activity to evolve to an endemic stage vs. a pandemic stage, which may lengthen the revenue stream but likely at a more subdued level.

Reducing drug costs has been a bipartisan issue in the past few years, and the passage of the Inflation Reduction Act (IRA) included new legislation enabling Medicare to directly negotiate pricing on the top 10 branded drugs. The act will have no near-term impact, but it will affect pricing effective January 2026, and it will expand to 20 branded drugs by 2028. In August, the CMS posted the first list of the 10 prescription drugs selected for negotiation. Two biotech firms' drugs are on the list: (i) Enbrel, manufactured by Amgen to treat psoriasis and arthritis; and (ii) Imbruvica, co-developed and commercialized by Abbvie and JNJ to treat cancer. During June 2022–May 2023, Medicare Part D spending on Enbrel and Imbruvica was \$2.79B and \$2.66B, respectively. From a company perspective, we do not see a strategic change based on the IRA in the near term; yet, there is a risk that the act has future implications as to where companies decide to invest in the future.

We think that the FTC appears to be taking a more active stance on antitrust review. We are seeing increased scrutiny for potential biopharma M&A activity, which may result in delays in approvals and higher deal making costs, in our view. The FTC filed a lawsuit against Amgen in May for its \$28B acquisition of Horizon Therapeutics on the grounds that Amgen can pressure insurers and pharmacy benefit managers to accept higher prices for Horizon's drugs. In a surprise move in August, however, the FTC decided to pause its challenge to the deal. In October, Amgen

successfully closed the acquisition of Horizon, slightly later than anticipated. Following this move, we see reduced concerns on Pfizer's \$43B acquisition of cancer drugmaker Seagen around antitrust scrutiny. The deal is expected to close by year-end 2023.

In the long run, the growth of the biotech industry depends on the volume of new therapy approvals. The number of approvals hit a high water mark in 2018 (61), although 2019–2021 levels have been in a range of 75%–90% of peak, indicating modest drops. In 2022, the FDA approved only 37 novel drugs as new molecular entities (NMEs) under New Drug Applications (NDAs), or as new therapeutic biological products under Biologics License Applications (BLAs). This is below typical levels and under the 2021 level (52 novel drugs). New drugs usually take at least five years to reach peak sales levels, so if the current pace does not improve, it suggests some long-run headwinds beginning in 2027. We believe part of the recent decline may stem from more FDA resources being reallocated to Covid-related therapies, but if true, then Covid-19 entering an endemic phase may enable the FDA to return to pre-Covid activity levels, in our view.

Year-to-date through October 13, the S&P 1500 Biotech Index was down 3.9% vs. a 11.6% rise for the S&P Composite 1500 Index. In 2022, the S&P Biotech Index returned a gain of 11.1% vs. a 19.1% decline for the S&P Composite 1500.

11:03 AM ET... CFRA Keeps Hold Opinion on Shares of AbbVie Inc. [ABBV 149.00***]: We raise our target price to \$152 from \$142, 13.1x our '24 EPS estimate, a premium to ABBV's five-year historical forward P/E average. We lift our '23 EPS estimate by \$0.06 to \$11.01, but cut '24 EPS by \$0.15 to \$11.56. Abbvie reported Q2 EPS of \$2.91 vs. \$3.37, \$0.01 above our estimate and \$0.10 above consensus. The company's Q2 revenue of \$13.9B [-4.9% Y/Y] outperformed expectations, as it came \$345M above consensus estimates, driven by exceptionally strong sales performance by the fast-growing immunology drugs Skyrizi [+50.4% Y/Y] and Rinvoq [+55.1% Y/Y], both in the U.S. and international markets. This partially offset the continued sales declines in Humira [29% of total revenue, -25% Y/Y]. The neuroscience segment continued to see the highest growth [+13.6% Y/Y], driven by solid sales in Botox Therapeutic [+10% Y/Y] and the new antidepressant medication Vraylar [+33.9% Y/Y]. Despite the improved outlook and the upwards revision to the revenue guidance, we expect Abbvie's 2023 revenues to be -8.4% Y/Y. / Sel Hardy

June 30, 2023

01:12 PM ET... CFRA Raises View on Shares of AbbVie Inc. to Hold from Sell [ABBV 135.10***]: We raise our 12-month target price by \$9 to \$142, 12.1x our 2024 EPS estimate, almost in line with ABBV's 10-year historical forward P/E average. We lift our 2023 EPS estimate by \$0.10 to \$10.95 and maintain our 2024 EPS at \$11.71. While we continue to think that Abbvie's top-line growth will be negatively hit by key drug Humira's loss of expiry and biosimilars' competition starting this year, we think there is solid revenue potential from key dermatology drugs, Skyrizi and Rinvoq, through 2028 to counterbalance the negative impact. Based on EvaluatePharma's data, both Skyrizi and Rinvoq will be on the list of top-selling drugs by 2028 globally with worldwide sales expected to reach \$14.5B and \$10.0B, respectively. With Abbvie's shares down more than 17% YTD, we think the downside potential is limited at current valuations and change our recommendation to Hold from Sell. / Sel Hardy

April 27, 2023

03:44 PM ET... CFRA Keeps Sell Opinion on Shares of AbbVie Inc. [ABBV 150.00**]: Following Q1 earnings' release, we keep our Sell view and our 12-month target at \$133, 11.4x our '24 EPS estimate, a premium to ABBV's 5-year historical forward P/E average. We lower our 2023 EPS estimate by \$0.11 to \$10.85 and our 2024 EPS by \$0.40 to \$11.71. Q1 EPS of \$2.46 vs. \$3.16 was \$0.03 below consensus and \$0.12 below our estimate. Q1 revenues of \$12.2B, down 10% Y/Y, were \$5M below consensus estimates as sales declines in autoimmune sales drug Humira [29% of total, -25% Y/Y] were slightly higher than expected due to biosimilar competition. This continued to be partially offset by fast-growing immunology drugs Skyrizi [+45% Y/Y] and Rinvoq [+48% Y/Y]. With the exception of neuroscience [14% of total, +14% Y/Y], which includes the blockbuster drug Botox [+17% Y/Y] and the new antidepressant medication Vraylar [+31.3% Y/Y], all therapy areas recorded declines. Abbvie made a modest upward \$0.10 revision to its EPS guidance range [\$10.72 - \$11.12], which does not create a significant impact, in our view. / Sel Hardy

February 09, 2023

12:06 PM ET... CFRA Cuts View on Shares of Abbvie Inc. to Sell from Hold [ABBV 152.49**]: We cut our 12-month target by \$18 to \$133, reflecting an 11x multiple of projected '24 EPS. The applied multiple is slightly above the historical forward average, but we think merited on a surging growth rate for two of ABBV's key drugs in its portfolio (Skyrizi and Rinvoq), which look like heir apparents to its legacy blockbuster drug, Humira, that recently lost patent exclusivity in the U.S. We cut our '23 EPS estimate by \$0.68 to \$10.96 and start '24's at \$12.11. Q4 operating EPS of \$3.60 vs. \$3.31, \$0.02 above the consensus view. We think ABBV's pipeline in Neuroscience should yield improving results in the coming years, and guidance on the revenue path for Skyrizi and Rinvoq suggest that the company can meet or exceed peak Humira revenues in a few years. However, current valuation for ABBV is well above typical, and with '23 likely to be a trough year on earnings, partially dependent on the pace of a China recovery, we think investors should be wary on valuation. Shares yield 4.1%. / Stewart Glickman, CFA

October 31, 2022

11:38 AM ET... CFRA Cuts View on Shares of AbbVie Inc. to Hold From Buy [ABBV 147.25***]:

Our 12-month target of \$151, cut \$17, reflects a 13x multiple of '23 EPS, above ABBV's historical forward average, but lower than previously applied. We cut our '22 EPS estimate by \$0.04 to \$13.87, and '23's by \$0.38 to \$11.64. Q3 EPS of \$3.66 vs. \$3.33 beat consensus by \$0.09. Total net revenues in Q3 of \$14.8B, excluding forex, was up 5.8% Y/Y. On the one hand, Skyrizi continues to impress (revenues of \$1.4B, up 17% vs. Q2) and Rinvoq added \$695 million in sales, also up 17%. Collectively, these two immunology drugs added over \$2.0B in Q3, and should help blunt the impact of the looming U.S. loss of exclusivity for Humira in '23 [\$5.6B in sales in Q3, up 3.9%, but strongly U.S.-driven]. However, ABBV gets ~10% of its book of business from the Aesthetics category, which is largely cash pay, and could suffer if a steep recession arrives. We think ABBV's longer-term prognosis is still good, but earnings power likely declines in '23 and on valuation, we now see limited upside. / Stewart Glickman, CFA

July 29, 2022

05:24 PM ET... CFRA Keeps Buy Opinion on Shares of Abbvie Inc. [ABBV 142.25***]: Our 12-month target of \$168, up \$3, reflects a 14x multiple of '23 EPS, slightly above ABBV's historical forward average. We cut our '22 EPS estimate by \$0.15 to \$13.91, but lift '23's by \$0.20 to \$12.02. Q2 EPS of \$3.37 vs. \$3.11 beat consensus by \$0.06. Total net revenues in Q2 of \$14.6 billion, excluding the impact of foreign exchange, was up 6.1% year-over-year. Skyrizi continues to impress (revenues of \$1.2 billion, up 33% sequentially) and Rinvoq added \$592 million in sales, up 27% sequentially. ABBV has recently obtained regulatory approvals for both drugs in new indications -- Skyrizi for Crohn's disease in the U.S. and Rinvoq for ulcerative colitis in Europe -- which adds to their long-term potential. Overall sales are still led by Humira [\$5.4 billion in Q2, up 6.8% ex-forex], but newer drugs help ABBV as Humira nears its patent cliff in '23. Adjusted operating margins of 51% were up 220 basis points year-over-year and ABBV sees expansion to 51.8% for '22 as a whole. / Stewart Glickman, CFA

May 02, 2022

01:29 PM ET... CFRA Keeps Buy Opinion on Shares of AbbVie Inc. [ABBV 147.90***]: Our 12-month target price of \$165, cut \$9, reflects a 14x multiple applied to our '23 EPS estimate. The applied multiple is above ABBV's historical forward average, but merited in our view given ongoing ascension of key immunology drugs Skyrizi and Rinvoq [8% of '21 revenues and heir apparents for Humira after it reaches its loss of exclusivity cliff in '23]. We cut our '22 EPS estimate by \$0.08 to \$14.06 and '23's by \$0.62 to \$11.82. Q1 EPS of \$3.16, vs. \$2.95, beat the consensus view by \$0.02. ABBV noted that Rinvoq received FDA approval for ulcerative colitis, while Skyrizi is gaining market share in treatment for psoriasis, and the company's anticipated launch of a treatment for Crohn's Disease (pending regulatory approval) could be another catalyst. Shares yield 3.8%, adding to total return potential. We estimate a '22 payout ratio of 40%, which we think is defensible. / Stewart Glickman, CFA

Forecasts are not reliable indicator of future performance.
Note: A company's earnings outlook plays a major part in any investment decision. S&P Global Market Intelligence organizes the earnings estimates of over 2,300 Wall Street analysts, and provides their consensus of earnings over the next two years, as well as how those earnings estimates have changed over time. Note that the information provided in relation to consensus estimates is not intended to predict actual results and should not be taken as a reliable indicator of future performance.
Note: For all tables, graphs and charts in this report that do not cite any reference or source, the source is S&P Global Market Intelligence.

AbbVie Inc.

Glossary

STARS

Since January 1, 1987, CFRA Equity and Fund Research Services, and its predecessor S&P Capital IQ Equity Research has ranked a universe of U.S. common stocks, ADRs [American Depositary Receipts], and ADSs [American Depositary Shares] based on a given equity's potential for future performance. Similarly, we have ranked Asian and European equities since June 30, 2002. Under proprietary STARS [Stock Appreciation Ranking System], equity analysts rank equities according to their individual forecast of an equity's future total return potential versus the expected total return of a relevant benchmark [e.g., a regional index (MSCI AC Asia Pacific Index, MSCI AC Europe Index or S&P 500® Index)], based on a 12-month time horizon. STARS was designed to help investors looking to put their investment decisions in perspective. Data used to assist in determining the STARS ranking may be the result of the analyst's own models as well as internal proprietary models resulting from dynamic data inputs.

S&P Global Market Intelligence's Quality Ranking

[also known as **S&P Capital IQ Earnings & Dividend Rankings**] - Growth and S&P Capital IQ Earnings & Dividend Rankings stability of earnings and dividends are deemed key elements in establishing S&P Global Market Intelligence's earnings and dividend rankings for common stocks, which are designed to capsule the nature of this record in a single symbol. It should be noted, however, that the process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+ Highest	B Below Average
A High	B- Lower
A Above	C Lowest
B+ Average	D In Reorganization
NC Not Ranked	

EPS Estimates

CFRA's earnings per share (EPS) estimates reflect analyst projections of future EPS from continuing operations, and generally exclude various items that are viewed as special, non-recurring, or extraordinary. Also, EPS estimates reflect either forecasts of equity analysts; or, the consensus [average] EPS estimate, which are independently compiled by S&P Global Market Intelligence, a data provider to CFRA. Among the items typically excluded from EPS estimates are asset sale gains; impairment, restructuring or merger-related charges; legal and insurance settlements; in process research and development expenses; gains or losses on the extinguishment of debt; the cumulative effect of accounting changes; and earnings related to operations that have been classified by the company as discontinued. The inclusion of some items, such as stock option expense and recurring types of other charges, may vary, and depend on such factors as industry practice, analyst judgment, and the extent to which some types of data is disclosed by companies.

12-Month Target Price

The equity analyst's projection of the market price a given security will command 12 months hence, based on a combination of intrinsic, relative, and private market valuation metrics, including Fair Value.

Abbreviations Used in Equity Research Reports

- CAGR - Compound Annual Growth Rate
- CAPEX - Capital Expenditures
- CY - Calendar Year
- DCF - Discounted Cash Flow
- DDM - Dividend Discount Model
- EBIT - Earnings Before Interest and Taxes
- EBITDA - Earnings Before Interest, Taxes, Depreciation & Amortization
- EPS - Earnings Per Share
- EV - Enterprise Value
- FCF - Free Cash Flow
- FFO - Funds From Operations
- FY - Fiscal Year
- P/E - Price/Earnings
- P/NAV - Price to Net Asset Value
- PEG Ratio - P/E-to-Growth Ratio
- PV - Present Value
- R&D - Research & Development
- ROCE - Return on Capital Employed
- ROE Return on Equity
- ROI - Return on Investment
- ROIC - Return on Invested Capital
- ROA - Return on Assets
- SG&A - Selling, General & Administrative Expenses
- SOTP - Sum-of-The-Parts
- WACC - Weighted Average Cost of Capital

Dividends on American Depositary Receipts (ADRs) and American Depositary Shares (ADSs) are net of taxes (paid in the country of origin).

Qualitative Risk Assessment

Reflects an equity analyst's view of a given company's operational risk, or the risk of a firm's ability to continue as an ongoing concern. The Qualitative Risk Assessment is a relative ranking to the U.S. STARS universe, and should be reflective of risk factors related to a company's operations, as opposed to risk and volatility measures associated with share prices. For an ETF this reflects on a capitalization-weighted basis, the average qualitative risk assessment assigned to holdings of the fund.

STARS Ranking system and definition:

★★★★★ 5-STARS (Strong Buy):

Total return is expected to outperform the total return of a relevant benchmark, by a notable margin over the coming 12 months, with shares rising in price on an absolute basis.

★★★★★ 4-STARS (Buy):

Total return is expected to outperform the total return of a relevant benchmark over the coming 12 months.

★★★★★ 3-STARS (Hold):

Total return is expected to closely approximate the total return of a relevant benchmark over the coming 12 months.

★★★★★ 2-STARS (Sell):

Total return is expected to underperform the total return of a relevant benchmark over the coming 12 months.

★★★★★ 1-STAR (Strong Sell):

Total return is expected to underperform the total return of a relevant benchmark by a notable margin over the coming 12 months, with shares falling in price on an absolute basis.

Relevant benchmarks:

In North America, the relevant benchmark is the S&P 500 Index, in Europe and in Asia, the relevant benchmarks are the MSCI AC Europe Index and the MSCI AC Asia Pacific Index, respectively.

AbbVie Inc.

Disclosures

Stocks are ranked in accordance with the following ranking methodologies:

STARS Stock Reports:

Qualitative STARS rankings are determined and assigned by equity analysts. For reports containing STARS rankings refer to the Glossary section of the report for detailed methodology and the definition of STARS rankings.

Quantitative Stock Reports:

Quantitative rankings are determined by ranking a universe of common stocks based on 5 measures or model categories: Valuation, Quality, Growth, Street Sentiment, and Price Momentum. In the U.S., a sixth sub-category for Financial Health will also be displayed. Percentile scores are used to compare each company to all other companies in the same universe for each model category. The five [six] model category scores are then weighted and rolled up into a single percentile ranking for that company. For reports containing quantitative rankings refer to the Glossary section seof the report for detailed methodology and the definition of Quantitative rankings.

STARS Stock Reports and Quantitative Stock Reports:

The methodologies used in STARS Stock Reports and Quantitative Stock Reports [collectively, the "Research Reports"] reflect different criteria, assumptions and analytical methods and may have differing rankings. The methodologies and data used to generate the different types of Research Reports are believed by the author and distributor reasonable and appropriate. Generally, CFRA does not generate reports with different ranking methodologies for the same issuer. However, in the event that different methodologies or data are used on the analysis of an issuer, the methodologies may lead to different views on the issuer, which may at times result in contradicting assessments of an issuer. CFRA reserves the right to alter, replace or vary models, methodologies or assumptions from time to time and without notice to clients.
