Analysis prepared by **Emily Nasseff Mitsch** on Aug 11, 2023 01:40 PM ET, when the stock traded at **USD 34.54**.

Highlights

- ▶ Q2 sales fell 14% Y/Y on volume declines in Titanium Technologies and the Advanced Performance Materials portfolio, partially offset by pricing gains. Volume declines were 27% in TT, 1% in Thermal & Specialized Solutions, and 9% in APM. We believe CC will see sales declines of 6% in 2023 and 3% in 2024 given its large presence in the manufacturing of harmful chemicals in most of its segments.
- ▶ Its TSS segment has a leading position in the fluorochemicals market and its APM segment produces products containing PFAS and Gen-X (previously known as C8), all of which are highly toxic and have been linked to certain cancers. We believe possible regulatory pressure may eliminate or restrict CC's ability to produce products containing these chemicals.
- ▶ Q2 EBIT margin declined Y/Y on lower volumes and higher input/raw material costs, partially offset by strong pricing. We think EBIT margin will contract in 2023 with high raw material prices, such as chlorine. Also, with lower forecasted volumes and days sales inventory (DSI) rising to 107 days in Q2 2023 from 78 days in Q2 2022, we believe margins will be under significant pressure. We estimate 2023 and 2024 EBIT margin to contract 225 bps and 100 bps.

Investment Rationale/Risk

- ▶ Our Strong Sell rating is driven by our view that CC will face significant legal issues given its involvement in many lawsuits. In one of CC's most recent settlements in Stuart, FL, the company paid out \$592M to resolve complaints of CC polluting many U.S. drinking water systems with harmful chemicals (PFAS). This is just one of many cases, with plaintiffs including water providers, airports, a number of states, and private well owners, with possible personal injury claims from individuals. PA became the latest state to sue, accusing CC and DD of marketing these chemicals to firefighting foam manufacturers in the state, despite knowing they posed health dangers. We think CC is a big liability, and believe some form of regulation will be put into place, ultimately eliminating/restricting CC's ability to produce/sell its products.
- ▶ Risks to our Strong Sell rating include no further lawsuits against CC (unlikely) and no regulation of these chemicals ever being put into place.
- ▶ Our 12-month price target is \$21 using a forward P/E of 6.5x our 2024 EPS estimate, below the five-year average of 7.6x, on lower expected demand for CC's products, margin issues with DSI moving up, and the many lawsuits.

Analyst's Risk Assessment

LOW	MEDIUM	HIGH
-----	--------	------

Our risk assessment for The Chemours Company reflects the cyclical nature of the company's business, along with CC being highly leveraged, offset by CC's commitment to creating clean energy and driving innovation in low global warming potential (GWP) thermal management solutions to support transitions to more sustainable products. That said, we believe CC faces significant risk from current and future lawsuits regarding its involvement in the manufacture of the toxic "forever chemicals" (PFAS) and Gen-X, previously known as C8, as well as its involvement in water contamination with forever chemicals.

The Chemours Company

Business Summary Aug 11, 2023

CORPORATE OVERVIEW. The Chemours Company [CC] is a leading, global provider of performance chemicals that are key inputs in end-products and processes in a variety of industries. CC produces a wide range of industrial and specialty chemical products for markets, including plastics and coatings, refrigeration and air conditioning, general industrial, electronics, mining, and oil refining. CC became an independent company in July 2015 after it was separated from what was then the E. I. Du Pont de Nemours. The company is headquartered in Wilmington, Delaware and, as of 2022, operates in three segments: Titanium Technologies [51% of total 2022 sales], Thermal & Specialized Solutions [25%], and Advanced Performance Materials [24%].

The Titanium Technologies [TT] segment is one of the largest global producers of titanium dioxide [TiO2] pigment, which is used to deliver whiteness, brightness, opacity, durability, efficiency, and protection in applications, including architectural and industrial coatings, flexible and rigid plast packaging, PVC, laminate papers used for furniture and building materials, coated paper, and coated paperboard used for packaging. Demand for TiO2 pigment is highly correlated to growth in the global residential housing, commercial construction, and packaging markets, and long-term industry demand is generally expected to grow proportionately with global GDP growth.

The Thermal & Specialized Solutions [TSS] segment provides refrigerants, thermal management solutions, propellants, foam blowing agents, and specialty solvents, and occupies a leading position in the fluorochemicals market. Fluorochemicals, a.k.a. PFAS or forever chemicals, are extremely toxic and persistent, and do not break down in the environment or human body. This segment also includes a new product called Opteon, a line of low global warming potential [GWP] HFO refrigerants, which is used in auto, air conditioning, commercial refrigeration, and foam blowing agents. Demand growth in this segment has generally been in line with global GDP growth.

The Advanced Performance Materials [APM] segment includes various industrial resins, specialty products, and coatings, serving a wide range of industrial and end-user applications, including electronics, communications, wires and cable, energy, consumer, oil and gas, and aerospace, among others. Fluoropolymers products are sold under the brand names Teflon, Viton, Krytox, and Nafion. Teflon, among others, contains forever chemicals and has been the source of several lawsuits over the years as exposure to it [especially when exposed to heat] can cause significant health problems, including high cholesterol, certain cancers, and ulcerative colitis. Demand growth for the APM segment has generally been in line with global GDP growth.

We believe all segments pose significant liability risk to the company, especially if future regulations prohibit or restrict CC’s ability to use or produce certain chemicals.

IMPACT OF MAJOR DEVELOPMENTS. In June 2023, CC announced the resignation of CFO Sameer Ralhan, effective June 19. Jonathan Lock, SVP and Chief Development Officer, was appointed to the role, effective June 6.

In January 2022, CC entered into a stock agreement to sell certain of its wholly owned subsidiaries and the remaining assets at its former Aniline business facilities in Pascagoula, Mississippi. The sale was completed on June 9, 2022.

In December 2021, CC entered into an agreement to sell land related to the Beaumont former operating site. The sale was completed on May 24, 2022.

In July 2021, CC entered into a definitive agreement to sell its Mining Solutions business for \$520 million in cash [10x 2020 EBITDA] to Draslovka Holding. We believe this transaction will help CC pay down debt and achieve capital allocation priorities. The transaction closed in December 2021.

DUPONT LAWSUIT. In June 2019, CC sued DuPont alleging that DuPont deliberately downplayed the cost of environmental liabilities that CC would be responsible reimbursing DuPont for relating to per- and polyfluoroalkyl substances [PFAS]. In March 2020, a Delaware judge granted DuPont’s request to dismiss the lawsuit. In January 2021, CC entered into a binding memorandum of understanding [MOU] with DuPont and Corteva, reflecting the parties’ agreement to share potential future legacy PFAS liabilities, with CC being liable for 50% of all future settlements. Despite this being somewhat favorable for CC since the company would not be responsible for 100% of future settlements, we still believe that with enough lawsuits, settlements could be significant and have an adverse effect on CC’s operations.

FINANCIAL TRENDS. Sales increased 7% to \$6.8 billion in 2022, driven by strong pricing, partially offset by lower TT volume, especially in the second half of the year, and currency headwinds. Adjusted EBITDA margin contracted 100 bps from 2021 to 2022, driven by lower volumes and raw material/logistics cost inflation.

We view CC’s balance sheet as somewhat manageable as its current assets cover 1.8x its current liabilities. However, CC has high debt levels, in our view. As of June 30, 2023, CC’s total debt was roughly 83% of its total capital and its net debt to EBITDA ratio was 7.1x. We do not see this favorably given that CC’s has been involved with a number of lawsuits/settlements, which we foresee continuing in the future. We note CC pays a \$0.25 quarterly dividend, which yields 4.7% our 12-month price target on an annual basis.

The Chemours Company

Sub-Industry Outlook

Our fundamental outlook for the diversified chemicals sub-industry for the next 12 months is neutral. We think sub-industry participants are positioned to benefit in a normalized environment (post-supply chain challenges) as well as from federal infrastructure spending, a steady growth trend in auto production, and positive trends in nonresidential construction (NRC). However, we note that high interest and mortgage rates could have adverse impacts on customer demand in home buying and believe the sub-industry will see a slow do-it-yourself (DIY) and repair & remodeling (R&R) markets.

R&R activity has been on the decline since Q3 2022 and the Leading Indicator of Remodeling Activity (LIRA), which measures the change in homeowner R&R spending on a four-quarter moving average, projects R&R spending to decrease from a reported 9.5% in Q2 to an estimated -5.9% by Q2 2024 (as of July 2023). Additionally, existing home sales are on the decline, decreasing 15% from August 2022 to August 2023. We expect this decrease in existing home sales and R&R to continue throughout the year and think companies that produce chemicals used in products for DIY and R&R markets, such as paints, coatings, sealants, and adhesives, will see a decline in demand and decreased revenue/earnings in 2023 and into 2024. That said, we have a positive long-term view on this market given the age of U.S. homes and given the supply of new homes remains historically low relative to demand levels.

We believe nonresidential construction is a positive given the recent rise in NRC spending and positive projected growth in 2023 and into 2024. NRC spending has increased 27% from July 2022 to July 2023, with manufacturing, health care, and education construction spending on the rise as businesses reshore operations back to the U.S. and hospitals and schools/universities make upgrades and expansions that were not in budget during the Covid-19 pandemic. As of July 2023, construction spending for education is up 13%, healthcare +20%, and manufacturing +71% since

one year ago. We also believe diversified chemicals will benefit from federal infrastructure spending due to the Bipartisan Infrastructure Framework that was signed into law in November 2021. Roads and bridges have the highest budget allocation at 57%. We believe the increase in spending will bode well for revenue and earnings in companies that manufacture and sell products with industrial and institutional construction exposure, such as industrial coatings, concretes, polymers, and other applications.

Diversified chemicals also have meaningful exposure to vehicle production, which we see as a positive in 2023 and into 2024. From July 2022 to July 2023, domestic auto production rose 6%, according to S&P Global Mobility, and global light vehicle production is expected to rise 5% in 2023 and 1.4% in 2024, with North American production forecasted to rise 8% in 2023 and 2% in 2024 (as of July 2023). We believe favorable auto production trends will bode well for diversified chemicals that support the auto industry including refrigerants, tire additives, polymers, and coatings.

YTD through September 28, 2023, the S&P 1500 Diversified Chemicals Index has decreased 7%, underperforming both the S&P 1500 Index [+11%] and the S&P 1500 Materials Sector Index [+1%].

The Chemours Company

Analyst Research Notes and other Company News

July 28, 2023

03:53 PM ET... CFRA Downgrades Opinion on The Chemours Company to Strong Sell from Sell [CC 36.64*]:

We lower our 12-month price target by \$3 to \$21 using a forward P/E of 6.5x our 2024 EPS estimate, below the one-year average of 7.7x, on lower forecasted demand for CC's products, margin contraction, and mounting lawsuits. We lower our 2023 EPS estimate by \$0.22 to \$3.62 and 2024's by \$0.49 to \$3.23. Q2 sales fell 14% Y/Y on volume declines in Titanium Technologies and the Advanced Materials portfolio, partially offset by pricing gains. CC posted Q2 EPS of \$1.10, beating consensus by \$0.03. We believe margins will be significantly under pressure with lower volumes, and note that CC has been involved in a multitude of lawsuits in recent years/months, with more expected in the future, regarding the manufacture of the toxic "forever chemicals" (PFAS) and Gen-X [previously known as C8]. We believe some form of regulation may come given mounting lawsuits, ultimately eliminating or restricting CC's ability to produce these chemicals, which would have an adverse effect on CC's operations. / Emily Nasseff Mitsch

June 13, 2023

01:15 PM ET... CFRA Downgrades Opinion on The Chemours Company to Sell from Buy [CC 32.10**]:

We lower our 12-month price target by \$13 to \$24 using a forward P/E of 6.5x our 2024 EPS estimate, below the historical three-year average of 8.7x, on lower forecasted demand for CC's products and issues regarding margins with days sales inventory (DSI) moving up. We lower our 2023 EPS estimate by \$0.16 to \$3.84 and 2024's by \$1.61 to \$3.72. With DSI rising to 115 days in Q1 2023 from 82 days in Q1 2022, we believe margins will be under significantly more pressure than previously expected due to lower volumes. In addition, we note that CC has been involved in a multitude of lawsuits in recent years, with more expected in the future, regarding the manufacture of the toxic "forever chemicals" (PFAS) and Gen-X, previously known as C8. We believe as word gets out as to how bad these chemicals actually are for humans, and with mounting lawsuits, some form of regulation will come, ultimately eliminating or restricting the ability to produce these chemicals, which would have an adverse effect on CC's operations. / Emily Nasseff Mitsch

April 28, 2023

02:19 PM ET... CFRA Upgrades Rating on The Chemours Company to Buy from Hold [CC 28.97****]:

We lift our 12-month price target by \$2 to \$37 using a forward P/E of 7x our 2024 EPS estimate, below both the three-year historical average of 8.8x and the peer average of 8x. We lower our 2023 EPS estimate by \$0.35 to \$4.00 and 2024's by \$0.32 to \$5.33. Q1 sales declined 13% Y/Y on lower volumes in Titanium Technologies (TT) and advanced materials, as well as unfavorable FX translation, partially offset by higher volumes in Thermal & Specialized Solutions, due to high demand for CC's Opteon products, and higher pricing. CC posted Q1 EPS of \$0.98, beating consensus by \$0.51. Despite cuts to our '23 and '24 EPS estimates, we upgrade our opinion to a Buy as we believe shares are undervalued by about 27%, according to our estimates, and we have a positive short- and long-term outlook on CC's Opteon products that have zero ozone depletion potential (ODP), and low to ultra-low global warming potential (GWP), with a push for clean energy alternatives by legislators. / Emily Nasseff Mitsch

February 10, 2023

11:32 AM ET... CFRA Lowers Opinion on The Chemours Company to Hold from Buy [CC 33.50***]:

We lower our 12-month target by \$8 to \$35 using our '24 EBITDA estimate and a forward EV/EBITDA ratio of 5.4x. We lower our '23 EPS estimate by \$1.82 to \$4.35 and set '24's as \$5.65. Q4 sales fell 15% Y/Y led by a 35% volume decline in Titanium Technologies (TT) (45% of sales) and negative FX translation, partially offset by higher pricing and a 4% volume gain in Thermal & Specialized Solutions (TSS) (24% of sales). Q4 EPS were \$0.00, a \$0.08 consensus miss. Because TT is highly correlated to growth in residential housing & construction, we believe '23 will be a challenging year for CC given a slowdown in new housing starts and construction due to high interest and mortgage rates. That said, we think TSS will be a bright spot in '23 given the segment's goal of supporting customer transitions to more sustainable products. We believe the margin will contract in '23 with lower TT volumes, but expand in '24 with residential recovery. We note CC has slightly high debt levels with total debt/EBITDA of 3.3x. / Emily Nasseff Mitsch

October 26, 2022

11:29 AM ET... CFRA Keeps Buy Rating on The Chemours Company [CC 28.83****]: We raise our 12-month price target a slight \$1 to \$43 using a forward P/E multiple of 6.9x, near comparable peers. We raise our '22 EPS estimate by \$0.07 to \$5.80 and '23's by \$0.17 to \$6.17. CC posted '22 Q3 earnings of \$1.24, beating consensus by \$0.20. Sales increased 6% Y/Y to \$1.78b, with adjusted EBITDA down 2% Y/Y. CC cited strength in the Advanced Performance Materials and Thermal & Specialized Solutions segments, which drove most of Q3 earnings and helped to offset headwinds in the Titanium Technologies segment. An 18% price increase contributed to increased Y/Y sales, which was partially offset by lower volumes and unfavorable currency translation due to a stronger USD. Portfolio change, driven by the sale of CC's Mining Solutions business in '21, was also a headwind on a Y/Y basis. Although we expect FX, lower volumes, and higher raw materials costs to be a challenge for CC, we're optimistic that the clean energy and sustainable products focus of the APM and TSS segments will drive strong business. / Emily Nasseff

July 29, 2022

12:11 PM ET... CFRA Keeps Buy Opinion on Shares of The Chemours Company [CC 36.33****]:

We reduce our 12-month price target to \$42 from \$48, shifting to a P/E of 7x our 2023 estimate, near comparable peers. We raise our 2022 EPS estimate to \$5.73 from \$5.51 and keep 2023 at \$6.00. CC posts Q2 EPS of \$1.89 vs. \$1.20, beating the \$1.42 consensus. Sales rose 16%, better than expected, driven by growth in Titanium Technologies (+13%), Thermal & Specialized Solutions (+52%), and Advanced Performance Materials (+11%). We positively view pricing, which was up 23% and drove revenue, offsetting volume declines and currency headwinds. EBITDA margins improved to 25% vs. 22% in the prior-year, on more favorable pricing mix as well as strong demand for both legacy and low GWP refrigerants. Although we expect FX and variable cost increases to act as headwinds near term, we remain optimistic about secular trends surrounding decarbonization/electronics/renewable energy driving the adoption of refrigerants and demand for CC's fluoropolymer brands. Valuation is extremely enticing at current levels, in our view. / Angelo Zino, CFA

June 08, 2022

08:31 AM ET... CFRA Lowers Opinion on Shares of The Chemours Company to Buy from Strong Buy [CC 44.79****]:

We lower our view on CC shares to Buy from Strong Buy on valuation. Shares have gained over 70% since our upgrade to Strong Buy in February 2021, far outperforming the S&P 1500 at +5%. A large portion of this can be attributed to this year's performance following the strong Q1 beat in May [CC shares are up 33% YTD versus S&P 1500 down 12%]. As a diversified chemicals company, CC has benefitted from the tight commodity cycle [titanium dioxide], coupled with strong demand trends and pricing actions in its specialty segments. We believe this will continue to be the case going forward, as secular trends surrounding decarbonization, electronics, and renewable energy drive the adoption of HFO refrigerants and demand for CC's fluoropolymer brands. We keep our 2022 EPS estimate at \$5.51 and raise our 2023 estimate to \$6.00 from \$5.75. We keep our 12-month price target at \$48, implying an enterprise multiple of 6.5x applied to our 2022 EBITDA estimate, in line with the company's five-year average multiple. / Richard Wolfe

The Chemours Company

Glossary

STARS

Since January 1, 1987, CFRA Equity and Fund Research Services, and its predecessor S&P Capital IQ Equity Research has ranked a universe of U.S. common stocks, ADRs [American Depositary Receipts], and ADSs [American Depositary Shares] based on a given equity's potential for future performance. Similarly, we have ranked Asian and European equities since June 30, 2002. Under proprietary STARS [Stock Appreciation Ranking System], equity analysts rank equities according to their individual forecast of an equity's future total return potential versus the expected total return of a relevant benchmark [e.g., a regional index (MSCI AC Asia Pacific Index, MSCI AC Europe Index or S&P 500® Index)], based on a 12-month time horizon. STARS was designed to help investors looking to put their investment decisions in perspective. Data used to assist in determining the STARS ranking may be the result of the analyst's own models as well as internal proprietary models resulting from dynamic data inputs.

S&P Global Market Intelligence's Quality Ranking

[also known as **S&P Capital IQ Earnings & Dividend Rankings**] - Growth and S&P Capital IQ Earnings & Dividend Rankings stability of earnings and dividends are deemed key elements in establishing S&P Global Market Intelligence's earnings and dividend rankings for common stocks, which are designed to capsule the nature of this record in a single symbol. It should be noted, however, that the process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+ Highest	B Below Average
A High	B- Lower
A Above	C Lowest
B+ Average	D In Reorganization
NC Not Ranked	

EPS Estimates

CFRA's earnings per share (EPS) estimates reflect analyst projections of future EPS from continuing operations, and generally exclude various items that are viewed as special, non-recurring, or extraordinary. Also, EPS estimates reflect either forecasts of equity analysts; or, the consensus [average] EPS estimate, which are independently compiled by S&P Global Market Intelligence, a data provider to CFRA. Among the items typically excluded from EPS estimates are asset sale gains; impairment, restructuring or merger-related charges; legal and insurance settlements; in process research and development expenses; gains or losses on the extinguishment of debt; the cumulative effect of accounting changes; and earnings related to operations that have been classified by the company as discontinued. The inclusion of some items, such as stock option expense and recurring types of other charges, may vary, and depend on such factors as industry practice, analyst judgment, and the extent to which some types of data is disclosed by companies.

12-Month Target Price

The equity analyst's projection of the market price a given security will command 12 months hence, based on a combination of intrinsic, relative, and private market valuation metrics, including Fair Value.

Abbreviations Used in Equity Research Reports

- CAGR - Compound Annual Growth Rate
- CAPEX - Capital Expenditures
- CY - Calendar Year
- DCF - Discounted Cash Flow
- DDM - Dividend Discount Model
- EBIT - Earnings Before Interest and Taxes
- EBITDA - Earnings Before Interest, Taxes, Depreciation & Amortization
- EPS - Earnings Per Share
- EV - Enterprise Value
- FCF - Free Cash Flow
- FFO - Funds From Operations
- FY - Fiscal Year
- P/E - Price/Earnings
- P/NAV - Price to Net Asset Value
- PEG Ratio - P/E-to-Growth Ratio
- PV - Present Value
- R&D - Research & Development
- ROCE - Return on Capital Employed
- ROE Return on Equity
- ROI - Return on Investment
- ROIC - Return on Invested Capital
- ROA - Return on Assets
- SG&A - Selling, General & Administrative Expenses
- SOTP - Sum-of-The-Parts
- WACC - Weighted Average Cost of Capital

Dividends on American Depositary Receipts (ADRs) and American Depositary Shares (ADSs) are net of taxes (paid in the country of origin).

Qualitative Risk Assessment

Reflects an equity analyst's view of a given company's operational risk, or the risk of a firm's ability to continue as an ongoing concern. The Qualitative Risk Assessment is a relative ranking to the U.S. STARS universe, and should be reflective of risk factors related to a company's operations, as opposed to risk and volatility measures associated with share prices. For an ETF this reflects on a capitalization-weighted basis, the average qualitative risk assessment assigned to holdings of the fund.

STARS Ranking system and definition:

★★★★★ 5-STARS (Strong Buy):

Total return is expected to outperform the total return of a relevant benchmark, by a notable margin over the coming 12 months, with shares rising in price on an absolute basis.

★★★★★ 4-STARS (Buy):

Total return is expected to outperform the total return of a relevant benchmark over the coming 12 months.

★★★★★ 3-STARS (Hold):

Total return is expected to closely approximate the total return of a relevant benchmark over the coming 12 months.

★★★★★ 2-STARS (Sell):

Total return is expected to underperform the total return of a relevant benchmark over the coming 12 months.

★★★★★ 1-STAR (Strong Sell):

Total return is expected to underperform the total return of a relevant benchmark by a notable margin over the coming 12 months, with shares falling in price on an absolute basis.

Relevant benchmarks:

In North America, the relevant benchmark is the S&P 500 Index, in Europe and in Asia, the relevant benchmarks are the MSCI AC Europe Index and the MSCI AC Asia Pacific Index, respectively.

The Chemours Company

Disclosures

Stocks are ranked in accordance with the following ranking methodologies:

STARS Stock Reports:

Qualitative STARS rankings are determined and assigned by equity analysts. For reports containing STARS rankings refer to the Glossary section of the report for detailed methodology and the definition of STARS rankings.

Quantitative Stock Reports:

Quantitative rankings are determined by ranking a universe of common stocks based on 5 measures or model categories: Valuation, Quality, Growth, Street Sentiment, and Price Momentum. In the U.S., a sixth sub-category for Financial Health will also be displayed. Percentile scores are used to compare each company to all other companies in the same universe for each model category. The five [six] model category scores are then weighted and rolled up into a single percentile ranking for that company. For reports containing quantitative rankings refer to the Glossary section of the report for detailed methodology and the definition of Quantitative rankings.

STARS Stock Reports and Quantitative Stock Reports:

The methodologies used in STARS Stock Reports and Quantitative Stock Reports [collectively, the "Research Reports"] reflect different criteria, assumptions and analytical methods and may have differing rankings. The methodologies and data used to generate the different types of Research Reports are believed by the author and distributor reasonable and appropriate. Generally, CFRA does not generate reports with different ranking methodologies for the same issuer. However, in the event that different methodologies or data are used on the analysis of an issuer, the methodologies may lead to different views on the issuer, which may at times result in contradicting assessments of an issuer. CFRA reserves the right to alter, replace or vary models, methodologies or assumptions from time to time and without notice to clients.
