Price Performance

Source: CFRA, S&P Global Market Intelligence Past performance is not an indication of future performance and should not be relied upon as such. Analysis prepared by Angelo Zino, CFA on Aug 01, 2023 11:47 AM ET, when the stock traded at USD 47.00.

Highlights

- We see sales growth of 17% in 2024 and 15% in 2025 after our view of an 18% rise in 2023. Gross bookings rose 16% in Q1 [+18% ex. forex], on growth in Mobility [+25%] and Delivery [+12%], while Freight fell 30%. In Mobility, we are encouraged by improving driver supply, supported by recent strategic partnerships and platform technology upgrades, as well as a healthy pricing environment, as active riders should improve through 2025. We like UBER's multi-app platform strategy and greater emphasis on subscriptions. In Delivery, monthly active platform consumers/basket size/order frequency all remain elevated, demonstrating a permanent change in consumer behavior, while UBER expands into new verticals.
- We are impressed by profitability, with UBER's ability to improve margins across both Mobility [\$1.17B adj. EBITDA in Q2; 24% margin] and Delivery [\$329M; 11%]. Given its better supply network, UBER can, we think, keep costs contained (headcount flat to down in 2H) while benefiting from greater scale as rides/deliveries increase.
- We note \$10.6B in cash/equity stakes and \$9.3B in long-term debt. We see free cash flow generation of about \$3B in 2023, +\$4.5B in 2024, and +\$6B in 2025 from scale benefits.

Investment Rationale/Risk

- Our Buy reflects our favorable secular views for both the Mobility and Delivery segments, rising addressable market, and belief that it will be disciplined on costs. We see UBER as a share taker, with trips increasing 22% in Q2; we also like the emphasis on product innovation (UberX Share, Uber Reserve) and see many levers to pull to control costs. New verticals are accelerating Delivery bookings (10% of segment bookings). UBER's taxi integration is also going well [goal of having every taxi on UBER by 2025]. We believe greater emphasis on subscription offerings (25% of gross bookings) and advertising put it in a good position to see notable FCF growth through 2025 and GAAP net income profitability in 2023, with the potential to embark on buybacks and get added to the S&P 500.
- Risks to our view include unexpected changes to the regulatory landscape, slower-than-expected adoption for TaaS, and greater-than-expected competitive pressures.
- Our 12-month target of \$60 is based on a P/E of 25.5x our 2025 EPS estimate of \$2.35. We positively view UBER's recent agreement with Dominos and expanded Waymo partnership (Waymo vehicles to support both ride-hailing trips/deliveries starting in Phoenix).

Analyst's Risk Assessment

LOW	MEDIUM	HIGH
-----	--------	------

Our risk assessment primarily reflects the relatively short history of the Mobility as a Service [MaaS] arena, lack of free cash flow generation, and significant liquidity needs as UBER looks to scale its business. This is partly offset by its market share lead position and strong brand in the ridesharing space.

Uber Technologies, Inc.

Business Summary Aug 01, 2023

CORPORATE OVERVIEW. Uber Technologies, Inc. [UBER] is a developer and supporter of proprietary technology applications that enable independent providers of ridesharing services as well as Eats meal preparation/delivery services to transact with end-users. At the end of 2022, Uber’s platform was available to a massive scale of more than 900 cities and 69 countries. UBER generates nearly all of its sales from fees paid by drivers and restaurants for use of its platform. Revenue is net of driver and restaurant earnings and driver incentives.

In the most recently completely second quarter of 2023, UBER generated all of its revenue under the following three categories: Mobility [53% of adjusted net revenue], Delivery [33%], and Freight [14%]. The Advanced Technologies Group was sold in the first quarter of 2021.

UBER generates Ridesharing revenue from service and booking fees paid by drivers for the use of its platform to connect with consumers in need of transportation and complete Ridesharing services. The Rides products connect consumers with Drivers who provide rides in a variety of vehicles, such as cars, auto rickshaws, motorbikes, minibuses, or taxis. Rides also include activity related to Uber for Business, Financial Partnerships, and Vehicle Solutions offerings. Uber Eats revenue comes from service fees paid by restaurants and drivers for use of the company’s platform to provide a meal or complete a meal delivery. Freight connects carriers with shippers on UBER’s platform, and gives carriers upfront, transparent pricing and the ability to book a shipment. Uber Freight was launched in 2017.

IMPACT OF MAJOR DEVELOPMENTS. In November 2021, Uber completed its acquisition of Transplace for \$2.2 billion, consisting of \$2.25 billion in cash. In October 2021, UBER acquired Drizly, the leading provider of on-demand alcohol delivery in the U.S., for \$1.1 billion in stock and cash (over 90% stock). We positively view the deal, as it instills another growth opportunity in the Eats business at a minimal expense. In December 2020, UBER acquired on-demand food delivery competitor Postmates for \$2.65 billion in an all-stock transaction. UBER issued 84 million shares (valued at \$31.45 per share). We note that Postmates brings 10 million plus active customers, with geographic strength in the Southwest (e.g., LA, LV, Orange County, San Diego, Phoenix), and like their subscription based program (Postmates Unlimited represents 30% plus orders) as it provides greater stickiness on the platform.

In July 2020, UBER acquired a 52% stake in CS-Global (Cornershop), a grocery delivery start-up. The initial fair value, as of the acquisition date of July 6, 2020, was \$290 million. Cornershop is active in Chile, Mexico, Peru, and Canada, and Uber plans to add other markets.

LEGAL/REGULATORY ISSUES. The biggest risk for ridesharing/food delivery platform providers is regulatory in nature. Any major unforeseen change to the regulatory environment, specifically in the U.S., could have severe negative consequences on the sustainability of their business models.

In late August 2021, the California courts invalidated Proposition 22, calling the voter-approved law unconstitutional and unenforceable. This is a retaliation to the November 2020 election outlook where the gig economy scored a big win when California residents voted in favor of Proposition 22, which allows UBER and LYFT, among others, to exempt themselves from reclassifying drivers as employees. While the court ruling was unexpected by many and won’t change how the companies treat their drivers in the intermediate term, it does increase risks that the gig economy model could be at risk in California. In addition, other states (e.g., Massachusetts) are looking to upend the business model of the ridesharing/food delivery space and a negative outcome in one state could have a trickle-down effect on others.

The attention of the gig economy is also catching the attention of the Biden administration. In April 2021, U.S. Labor Secretary Marty Walsh made a comment saying gig workers should be classified as employees. We are not surprised by the comments as members of the Biden administration have previously been in favor of such a measure. While an important topic, we believe the administration has more critical topics to contend with now, putting this issue on the back burner.

Although a change in classification in a key state like California/New York or on a national level would hurt business models of ride-hailing/delivery apps, we think many drivers in the U.S. prefer being treated as contractors given the flexibility/ability to work on several different competing platforms. Ultimately, we see the industry gravitating towards a new third model that would make sense for all parties (app-based platform providers, drivers, and politicians).

FINANCIAL TRENDS. We forecast ridesharing services, currently in early phases, will witness significant growth potential over the next 20-30 years. The ride-hailing space has been among the fastest-growing mobility services over the last decade, creating a new mode of transportation (defined as Mobility-as-a-Service or MaaS), disrupting the taxi and rental car industries. The key factors that will likely drive the growth of the global ridesharing service industry include a growing population, lower rate of car ownership among millennials, the rising trend of on-demand transportation services, and a growing supply of drivers.

Monthly active platform users rose 12% in the second quarter to 137 million, while total trips rose 22% (2.3 billion). We have been impressed by performance within UBER’s Delivery business, which generated adjusted EBITDA profitability of \$551 million in 2022 compared to a loss in 2021, as UBER benefits from greater operational efficiencies, advertising revenue, and scale. We see greater consumer adoption for Mobility as a Service and expect UBER to be among the earliest adopters of autonomous technology. We like UBER’s scale/market share lead position and greater geographic reach versus peers, but we note regulatory uncertainty.

On May 14, 2019, UBER closed its IPO at a price of \$45 per share and received net proceeds of approximately \$8.0 billion.

Uber Technologies, Inc.

Sector Outlook

CFRA recommends marketweighting the S&P 500 industrials sector. Year to date through October 13, 2023, the S&P 500 Industrials index, which represented 8.3% of the S&P 500 Index, rose 3.6% in price, compared with the 12.7% gain for the S&P 500. In 2022, this sector fell 7.1% versus a 19.4% decline for the S&P 500. There are 18 sub-industry indices in this sector. Aerospace & Defense is the largest, representing 19.0% of the sector's market value, while Data Processing & Outsourced Services is the smallest, accounting for 0.70% of the sector. This sector can be represented by the Industrial Select Sector SPDR ETF [XLI 102 ***].

The cap-weighted average of this sector's component company CFRA STARS (STock Appreciation Ranking System) is 3.2 out of 5.0, as compared to a cap-weighted average of 3.7 for the S&P 500. In addition, the sector has a below-average percentage of component issues with favorable investment recommendations. The sub-industries within this sector that currently show the highest average STARS are building products, data processing & outsourced services, diversified support services, environmental & facilities services, and passenger airlines. Those with the lowest average STARS include agricultural & farm machinery, air freight, cargo ground transportation, industrial conglomerates, rail transportation, and trading companies & distributors.

Tailwinds for the group include 1) infrastructure spending that has bipartisan support, which should spur increased demand for related industries (construction, heavy machinery, etc.); 2) the Chips Act, which includes an advanced manufacturing tax credit of 25%, as long as construction starts by 2026; 3) the need for improved transmission & distribution lines by modernizing, repairing, and expanding existing lines; 4) public spending on power projects up strongly Y/Y; and 5) an overdue replacement cycle in commercial aerospace.

Headwinds include 1) undertow from aerospace quality control snafus; 2) the slower pace of

industrial machinery orders; 3) the possibility of a commercial building end market slump as a result of high interest rates; 4) rail transport, which has been hurt recently by port strikes and labor cost inflation; and 5) weak consumer demand and rising competition from retailers, tempering the air freight goods volume outlook.

According to S&P Capital IQ consensus estimates, sector EPS rose 29.2% in 2022 versus the 4.6% gain for the S&P 500, while sector revenues increased 15.0% versus the 12.1% gain recorded by the market on the whole. Sector EPS are projected to rise 9.7% in 2023 versus the 0.1% decline seen for the S&P 500, while sector revenues are forecast to gain by 1.0% versus the 1.1% anticipated gain for the market. For 2024, sector EPS should rise 13.2% compared to the S&P 500's 11.7% increase, with sector revenues gaining 5.4% versus the market's gain of 5.2%. The sector's price-to-earnings (P/E) ratio is 18.4x, based on consensus next-12-month operating EPS estimates, versus the S&P 500's forward P/E of 18.8x. S&P Capital IQ also reports that the consensus long-term EPS growth estimate for this sector is 11.2% versus the S&P 500's 12.7%, giving the sector a P/E-to-projected EPS growth rate (PEG) ratio of 1.6x, as compared with the broader market's PEG of 1.5x. This sector pays a dividend yield of 1.8%, versus the yield of 1.7% for the S&P 500.

Finally, the technical outlook for this sector index is neutral, based on its trailing 40-week (200-day) relative strength.

Analyst Research Notes and other Company News

August 01, 2023

09:22 AM ET... CFRA Maintains Buy Opinion on Shares of Uber Technologies, Inc. [UBER 49.46****]:

We boost our 12-month target to \$60 from \$45 on a revised P/E of 25.5x our '25 EPS estimate [raised to \$2.35 from \$2.25]. We keep our '23 EPS view at \$1.10 and adjust '24's to \$1.79 from \$1.72. Gross bookings rose 16% [+18% ex-forex] on growth in Mobility [+25%] and Delivery [+12%] while Freight declined 30%. Growth in trips [+22%] and new offerings are supporting Mobility bookings growth while new verticals accelerate Delivery bookings [10% of segment bookings]. We are impressed by improving profitability, with adjusted EBITDA of \$916M [above the \$844M consensus], as Mobility benefits from better cost leverage/higher volume and Delivery generates higher advertising revenue [\$650M annualized run rate]. This is translating to higher FCF [\$1.1B in Q2 vs. \$382M] given UBER's highly scalable model, which we see at +\$4.5B in '24 and +\$6.5B in '25. We positively view UBER's recent agreement with Dominos and expanded Waymo partnership [Waymo vehicles to support both ride-hailing trips/deliveries starting in Phoenix]. / Angelo Zino, CFA

May 02, 2023

09:33 AM ET... CFRA Maintains Buy Opinion on Shares of Uber Technologies, Inc. [UBER 32.74****]:

We raise our 12-month target to \$45 from \$42, shifting to a P/E of 20x our '25 EPS estimate, which we start at \$2.25. We raise our '23 EPS view to \$1.10 from \$0.78 and '24 to \$1.72 from \$1.36. UBER posted Q1 adjusted EBITDA of \$761M vs. \$168M, beating the \$677M consensus. Gross bookings rose 19% [+22% ex-forex] on growth in Mobility [+40%] and Delivery [+8%], while Freight declined 23%. Mobility trips grew an impressive 32% [accelerating from +24% in Q4], with new riders spending and engaging more. New offerings are gaining traction [UberX Share, Uber Reserve], with driver earnings +40% vs. '19, healthy churn, taxi integration going well [every taxi on UBER by '25 goal], and 70% growth in ad base. Delivery is extremely sticky, while new verticals grew ~35% on improving profitability. We see 15%-20% bookings growth coupled with tight cost controls [headcount flat to down in 2H] driving GAAP income/FCF [\$549M vs. \$47M loss]. We see FCF of +\$4.5B in '24 and +\$6.0B in '25 [sets up potential for buybacks]. / Angelo Zino, CFA

March 14, 2023

11:34 AM ET... CFRA Sees Positive Implications for Gig Economy as Court Favors Proposition 22 [UBER 32.65****]:

Gig economy participants, which include ridesharing and food delivery firms, are up after a California appeals court upheld the current law classifying gig workers as independent contractors. The decision struck down a lower court ruling that found Prop 22 violated California's constitution. We believe the court ruling is an obvious positive for gig companies, as it allows these companies to keep existing cost structures in place by treating drivers as contractors. In addition, it also bodes positively for investor sentiment, as other states have been looking to upend the business model of the ridesharing/food delivery space and a negative outcome in California could've had a trickle-down effect into others. That said, we do not think this is the end and fully expect the gig economy to have to battle in the courts for the sustainability of its business models. We favor UBER over LYFT/DASH given a more diversified mix and our belief that it can generate higher FCF through its more scalable business model. / Angelo Zino, CFA

February 08, 2023

10:59 AM ET... CFRA Keeps Buy Opinion on Shares of Uber Technologies, Inc. [UBER 35.75****]:

We increase our 12-month target to \$42 from \$40 on revised DCF analysis. We raise our '23 EPS view to \$0.78 from \$0.70 and '24 to \$1.36 from \$1.28. UBER posted Q4 adjusted EBITDA of \$665M vs. \$85M, better than the \$624M consensus. Gross bookings rose 19% [+26% ex-forex], above our view, on growth in Mobility [+31%], Delivery [+6%], and Freight [+42%]. We believe Mobility is benefiting from new features like upfront fare prices that will roll-out globally in '23, consumer shift to services, elevated travel demand, and improving supply growth. We have been impressed by the sustainability of Delivery bookings [lapping tough omicron comps], as order frequency/basket sizes remain resilient, while segment profitability improves through greater advertising [\$500M run rate vs. \$350M in Q3; to achieve \$1B by 2024]. We think greater subscription revenue [25% of bookings] and execution toward improving profitability/margins/FCF is key, with GAAP profitability as the next major catalyst [we see this achieved by Q3]. / Angelo Zino, CFA

November 01, 2022

09:55 AM ET... CFRA Keeps Buy Opinion on Shares of Uber Technologies, Inc. [UBER 29.96****]:

We maintain our 12-month target at \$40 on DCF. We widen our '22 per share loss estimate to \$4.88 from \$4.31 [accounting for prior equity losses] and keep '23 at \$0.70 EPS. We also start our '24 EPS at \$1.28. UBER posted Q3 adjusted EBITDA of \$516M vs. \$8M, better than the \$456M consensus. Gross bookings rose 26% [+32% ex. forex], above our view, on growth in Mobility [+38%], Delivery [+7%], and Transplace contribution. We are impressed by UBER's ability to improve margins across both Mobility [\$898M adj. EBITDA; 23% margin] and Delivery [\$181M; 7%], on scale and cost efficiencies. We believe the recovery in Mobility is benefiting from the ongoing consumer shift towards services, healthy travel demand, and improved driver supply growth. Delivery orders remain elevated in a post pandemic landscape. We think UBER still has levers to pull to enhance profits/FCF, with advertising as an enticing opportunity [\$350M run rate to reach \$1B by 2024] to grow the bottom line. We note \$4.9B in cash and \$4.4B equity stakes. / Angelo Zino, CFA

October 11, 2022

02:42 PM ET... CFRA Sees Mixed Picture Among Gig Economy Given Uncertainty of Classification [UBER 25.20****]:

The Labor Department said it would revisit rules that designate whether workers are classified as employees or independent contractors [revert to the standard used under the Obama administration and not a full reclassification of drivers]. Although we are not surprised by stock price moves of gig companies [UBER, LYFT, DASH], as bears see an employee reclassification as a negative towards having a sustainable business model, we note that it is only a proposal. We have long viewed that a majority of drivers prefer the flexibility of being contractors and utilize these platforms as a secondary source of income. We think DASH would be least impacted by any major rule changes [drivers on average work less than five hours per week], while UBER is better positioned than LYFT should we ever see a full-blown change to how gig workers are classified. In any event, we think a hybrid approach [gig economy/employee classification structure] would work best for most drivers and allow UBER to be sustainably FCF positive. / Angelo Zino, CFA

August 02, 2022

09:39 AM ET... CFRA Keeps Buy Opinion on Shares of Uber Technologies [UBER 24.60****]:

We maintain our 12-month target at \$40, on DCF analysis. We widen our '22 per share loss estimate to \$4.31 [accounting for prior equity losses] from breakeven and keep '23 at \$0.70 EPS. UBER posted Q2 adjusted EBITDA of \$364M vs. \$509M loss, better than the \$260M consensus. Gross bookings rose 33%, above our view, on growth in Mobility [+55%], Delivery [+7%], and Transplace contribution. We believe the recovery in Mobility has been broad-based, supported by outsized strength at airports and improved driver supply growth/engagement despite higher gas prices. We like UBER's more variable-based cost model, opportunities with subscriptions/advertising, and emphasis on product innovation [e.g., upfront fares]. While Delivery is clearly slowing post pandemic, expansion in new verticals positions UBER well. We see UBER as a share taker in a slowing demand landscape with many levers to pull to enhance profits/FCF. We positively view FCF of \$382M as well as liquidity position [\$4.4B in cash and \$5B equity stakes]. / Angelo Zino, CFA

Forecasts are not reliable indicator of future performance.
Note: A company's earnings outlook plays a major part in any investment decision. S&P Global Market Intelligence organizes the earnings estimates of over 2,300 Wall Street analysts, and provides their consensus of earnings over the next two years, as well as how those earnings estimates have changed over time. Note that the information provided in relation to consensus estimates is not intended to predict actual results and should not be taken as a reliable indicator of future performance.
Note: For all tables, graphs and charts in this report that do not cite any reference or source, the source is S&P Global Market Intelligence.

Uber Technologies, Inc.

Glossary

STARS

Since January 1, 1987, CFRA Equity and Fund Research Services, and its predecessor S&P Capital IQ Equity Research has ranked a universe of U.S. common stocks, ADRs [American Depositary Receipts], and ADSs [American Depositary Shares] based on a given equity's potential for future performance. Similarly, we have ranked Asian and European equities since June 30, 2002. Under proprietary STARS [Stock Appreciation Ranking System], equity analysts rank equities according to their individual forecast of an equity's future total return potential versus the expected total return of a relevant benchmark [e.g., a regional index (MSCI AC Asia Pacific Index, MSCI AC Europe Index or S&P 500® Index)], based on a 12-month time horizon. STARS was designed to help investors looking to put their investment decisions in perspective. Data used to assist in determining the STARS ranking may be the result of the analyst's own models as well as internal proprietary models resulting from dynamic data inputs.

S&P Global Market Intelligence's Quality Ranking

[also known as **S&P Capital IQ Earnings & Dividend Rankings**] - Growth and S&P Capital IQ Earnings & Dividend Rankings stability of earnings and dividends are deemed key elements in establishing S&P Global Market Intelligence's earnings and dividend rankings for common stocks, which are designed to capsule the nature of this record in a single symbol. It should be noted, however, that the process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+ Highest	B Below Average
A High	B- Lower
A Above	C Lowest
B+ Average	D In Reorganization
NC Not Ranked	

EPS Estimates

CFRA's earnings per share (EPS) estimates reflect analyst projections of future EPS from continuing operations, and generally exclude various items that are viewed as special, non-recurring, or extraordinary. Also, EPS estimates reflect either forecasts of equity analysts; or, the consensus [average] EPS estimate, which are independently compiled by S&P Global Market Intelligence, a data provider to CFRA. Among the items typically excluded from EPS estimates are asset sale gains; impairment, restructuring or merger-related charges; legal and insurance settlements; in process research and development expenses; gains or losses on the extinguishment of debt; the cumulative effect of accounting changes; and earnings related to operations that have been classified by the company as discontinued. The inclusion of some items, such as stock option expense and recurring types of other charges, may vary, and depend on such factors as industry practice, analyst judgment, and the extent to which some types of data is disclosed by companies.

12-Month Target Price

The equity analyst's projection of the market price a given security will command 12 months hence, based on a combination of intrinsic, relative, and private market valuation metrics, including Fair Value.

Abbreviations Used in Equity Research Reports

- CAGR - Compound Annual Growth Rate
- CAPEX - Capital Expenditures
- CY - Calendar Year
- DCF - Discounted Cash Flow
- DDM - Dividend Discount Model
- EBIT - Earnings Before Interest and Taxes
- EBITDA - Earnings Before Interest, Taxes, Depreciation & Amortization
- EPS - Earnings Per Share
- EV - Enterprise Value
- FCF - Free Cash Flow
- FFO - Funds From Operations
- FY - Fiscal Year
- P/E - Price/Earnings
- P/NAV - Price to Net Asset Value
- PEG Ratio - P/E-to-Growth Ratio
- PV - Present Value
- R&D - Research & Development
- ROCE - Return on Capital Employed
- ROE Return on Equity
- ROI - Return on Investment
- ROIC - Return on Invested Capital
- ROA - Return on Assets
- SG&A - Selling, General & Administrative Expenses
- SOTP - Sum-of-The-Parts
- WACC - Weighted Average Cost of Capital

Dividends on American Depositary Receipts (ADRs) and American Depositary Shares (ADSs) are net of taxes (paid in the country of origin).

Qualitative Risk Assessment

Reflects an equity analyst's view of a given company's operational risk, or the risk of a firm's ability to continue as an ongoing concern. The Qualitative Risk Assessment is a relative ranking to the U.S. STARS universe, and should be reflective of risk factors related to a company's operations, as opposed to risk and volatility measures associated with share prices. For an ETF this reflects on a capitalization-weighted basis, the average qualitative risk assessment assigned to holdings of the fund.

STARS Ranking system and definition:

★★★★★ 5-STARS (Strong Buy):

Total return is expected to outperform the total return of a relevant benchmark, by a notable margin over the coming 12 months, with shares rising in price on an absolute basis.

★★★★★ 4-STARS (Buy):

Total return is expected to outperform the total return of a relevant benchmark over the coming 12 months.

★★★★★ 3-STARS (Hold):

Total return is expected to closely approximate the total return of a relevant benchmark over the coming 12 months.

★★★★★ 2-STARS (Sell):

Total return is expected to underperform the total return of a relevant benchmark over the coming 12 months.

★★★★★ 1-STAR (Strong Sell):

Total return is expected to underperform the total return of a relevant benchmark by a notable margin over the coming 12 months, with shares falling in price on an absolute basis.

Relevant benchmarks:

In North America, the relevant benchmark is the S&P 500 Index, in Europe and in Asia, the relevant benchmarks are the MSCI AC Europe Index and the MSCI AC Asia Pacific Index, respectively.

Uber Technologies, Inc.

Disclosures

Stocks are ranked in accordance with the following ranking methodologies:

STARS Stock Reports:

Qualitative STARS rankings are determined and assigned by equity analysts. For reports containing STARS rankings refer to the Glossary section of the report for detailed methodology and the definition of STARS rankings.

Quantitative Stock Reports:

Quantitative rankings are determined by ranking a universe of common stocks based on 5 measures or model categories: Valuation, Quality, Growth, Street Sentiment, and Price Momentum. In the U.S., a sixth sub-category for Financial Health will also be displayed. Percentile scores are used to compare each company to all other companies in the same universe for each model category. The five [six] model category scores are then weighted and rolled up into a single percentile ranking for that company. For reports containing quantitative rankings refer to the Glossary section of the report for detailed methodology and the definition of Quantitative rankings.

STARS Stock Reports and Quantitative Stock Reports:

The methodologies used in STARS Stock Reports and Quantitative Stock Reports [collectively, the "Research Reports"] reflect different criteria, assumptions and analytical methods and may have differing rankings. The methodologies and data used to generate the different types of Research Reports are believed by the author and distributor reasonable and appropriate. Generally, CFRA does not generate reports with different ranking methodologies for the same issuer. However, in the event that different methodologies or data are used on the analysis of an issuer, the methodologies may lead to different views on the issuer, which may at times result in contradicting assessments of an issuer. CFRA reserves the right to alter, replace or vary models, methodologies or assumptions from time to time and without notice to clients.

STARS Stock Reports:
